Rabbit Health Report Totals: October 2013 through September 2020

Representative animals are submitted alive to a reputable diagnostic laboratory for a complete health assessment which includes a complete physical examination, complete gross necropsy, pelt examination, fecal and cecal content examination, and histopathology of select organs (liver, kidney, lung, ileum). Cultures are taken of nasal/oropharynx aspirates, bronchial washes, and cecum to detect bacteria (*Pasteurella* spp., *Bordetella bronchiseptica*, *Salmonella* spp., etc.). Serology samples are submitted for *Treponema cuniculi*, *CARBacillus*, *Encephalitozooncuniculi*, and *Toxoplasma gondii*. PCR to detect *Pasteurella* spp and *Clostridium piliforme* is utilized based on suspect serology, culture, histopathology or herd health findings.
